MOHAMMAD (ARSALAN) MORAVVEJ

Backend Developer | PHP, Laravel, Python

Rasht/Tehran, Iran (Open to relocation and remote) | Phone: +98 936 857 2785
Email: moravvejmohammad97@gmail.com | GitHub: github.com/ArsalanMoravvej

SUMMARY

Backend Developer who built and owned the backend of two production **PHP/Laravel** products: an automated publishing pipeline delivering 400+ publications per week and an AI-assisted product-ranking engine on a platform with 30K+ registered users. Experienced with **Linux**, **Docker**, **Nginx**, **Redis** queues and **MySQL**, with a data-analysis background (**Python**, statistics) applied to building fair, outlier-resistant metrics.

EXPERIENCE

Backend Developer | Tesmino — Jun 2025 – Present | Rasht, Iran

- Engineered **Chabok**, an automated reportage-publishing platform in **Laravel**, delivering 400+ automated reportages each week and eliminating over 50 hours of manual effort per week.
- Developed **Topical Relevancy**, an AI-assisted product-ranking engine that scores products by indexed content, search volume and keyword rank, with keyword data in **ClickHouse**.
- Rebuilt the Google index-time metric that clients see and that compares publishers, replacing an outlier-skewed mean with a median over adaptive time windows validated by modified z-scores (**DataForSEO** data).
- Built scheduled monitoring of reportage and backlink health across ~3,000 publisher websites, catching broken or removed links within hours; before, they surfaced only when a client noticed.
- Maintained and refactored a large legacy **Laravel** codebase with automated tests in **Pest**; deployed services with **Docker**, **Nginx** and **Redis**/**Horizon** queues on **Linux**.

Software Support Specialist | ICAN Engineering Group — Dec 2023 – Jan 2025 | Tehran, Iran

- Administered **SQL Server** databases for office-automation and attendance software used by client organizations.
- Wrote **SQL** queries and scripts for reporting, data fixes and migrations, resolving support tickets.

Data Analyst Intern | Quera — Apr 2023 – Jul 2023 | Remote

- Designed relational databases, built **ML** models in **Python** and **Power BI** dashboards on real-world datasets.

TECHNICAL SKILLS

Languages: PHP, Python, SQL
Frameworks: Laravel, FastAPI
Databases: MySQL, PostgreSQL, Microsoft SQL Server, Redis, MongoDB, ClickHouse
DevOps & Tools: Linux, Docker, Nginx, Git, Pest, Laravel Horizon, Redis Queues, REST APIs, JWT Authentication
Data: Pandas, Statistical Analysis, DataForSEO API, Machine Learning, Web Scraping, Power BI, Streamlit

PROJECTS

Social Media Backend API — Feb 2024 | github.com/ArsalanMoravvej/Social-Media-App

- Built a RESTful API with **Python**, **FastAPI** and **PostgreSQL**, with JWT authentication and user and post management.

Transfermarkt Data Analysis — May 2023 | github.com/ArsalanMoravvej/Transfermarket-project

- Scraped and stored transfer-market data with **SQLAlchemy**, trained ML models and built a **Streamlit** dashboard.

Superstore Data Warehouse — Jun 2023 | github.com/ArsalanMoravvej/Superstore

- Designed a retail **data warehouse** and **Power BI** dashboard with statistical analysis and ML models.

EDUCATION

B.Sc. Electrical Engineering (Electronics) | Iran Technical and Vocational University — 2014 – 2019 | Rasht, Iran
2019 – 2023: Military service, then self-study in data science and machine learning (Coursera, Quera bootcamp)

CERTIFICATES

Task-Oriented Bootcamp in Data Analysis with Python | Quera — Jul 2023 | Link
Machine Learning | Coursera — Apr 2022 | Link
Neural Networks and Deep Learning | Coursera — May 2022 | Link

LANGUAGES

Persian (Native) | English (Advanced, C1) | German (Elementary, A2)
